---

Project: Lena Road from North of 44th Avenue East to SR 64

To: Shari K. Barnwell, PE

From: Jason Starr, PE, HDR Project Manager  
Heather Hubbard, PE, HDR Transportation and Traffic Engineer

---

Subject: Lena Road Alternatives Evaluation and Traffic Analysis

---

## 1.0 Purpose of Study

The purpose of this memorandum is to document the traffic operations and queueing analysis results at two study intersections along Lena Road for the design year (2045) Build Alternative, which includes extending Lena Road from S of 44<sup>th</sup> Avenue E to S of 34<sup>th</sup> Avenue E. Lena Road will have one lane in each direction on this new segment. This improvement will form a connection from SR 70 to SR 64. The SR 64/Lena Road intersection is currently signalized, and it was assumed that the Lena Road/Landfill Road intersection would be signalized by the design year (2045). Three Alternatives were considered for the northbound approach of the SR 64/Lena Road intersection. These Alternatives were compared and one is proposed for implementation. Queue lengths were analyzed at the study intersections to determine appropriate storage lengths under the Build Alternative.

## 2.0 Study Intersections

Lena Road is proposed as a 2-lane collector within the study area. The following two study intersections were analyzed for queue storage lengths:

- Lena Road/Powell Johnson Road-Landfill Road
- SR 64/Lena Road

It was assumed that both intersections would be signalized by the design year (2045). Lena Road has a proposed speed limit of 30 mph. The Landfill Road speed limit is 25 mph and the SR 64 speed limit is 50 mph. The project location is shown on **Figure 2.1**.

## 3.0 Traffic Data Collection

Eight-hour peak period turning movement counts were collected on June 14, 2022 at the study intersections. These counts were collected from 7:00 AM to 10:00 AM and 2:00 PM to 6:00 PM. The traffic count data can be found in **Attachment A**.

**Figure 2.1 – Lena Road Study Intersection Locations**

#### 4.0 Design Year (2045) Traffic Volume Development

Seasonal factors of 1.05 and 1.02 were applied to the raw AM and PM turning movement counts at the Lena Road/Landfill Road and SR 64/Lena Road intersections, respectively. The seasonal factors were taken from the 2021 Florida Traffic Online Manatee County Seasonal Factors Report for off-system roads east of I-75 and countywide, respectively, and can be found in **Attachment B**. These adjusted counts were used as the basis for design year (2045) volume development. A linear growth rate of 3.04 percent, taken from the Lena Road Corridor Study Traffic Analysis Memorandum, dated October 4, 2021, was applied to the adjusted counts to obtain the design year (2045) peak-hour volumes and the Determined Growth Rates section is provided in **Attachment C**. **Table 4.1** shows the design year (2045) AM and PM peak-hour volumes.

**Table 4.1. Design Year (2045) AM and PM Peak-Hour Volumes**

Intersection	EBU	EBL	EBT	EBR	WBU	WBL	WBT	WBR	NBU	NBL	NBT	NBR	SBU	SBL	SBT	SBR

## 5.0 SR 64/Lena Road Northbound Approach Alternatives

Three northbound approach Alternatives were analyzed for the SR 64/Lena Road intersection using Synchro, version 11.1.2.9. The Alternatives considered are:

- 1 left-turn lane, 2 through lanes, and 1 right-turn lane (originally shown in draft plans),
- 1 left-turn lane, 1 left-through lane, 1 through lane, and 1 right-turn lane (requires split phasing), and
- 2 left-turn lanes, 1 through lane, and 1 right-turn lane (dual left-turn lanes considered based on volume splits).

## 6.0 SR 64/Lena Road Design Year (2045) Operational Analysis - Comparison of Alternatives

A peak-hour factor (PHF) of 0.95 was used in the future year analyses rather than the existing PHFs. Truck percentages for each movement from the turning movement counts were maintained in the design year (2045) analysis. The cycle lengths were maintained at 160 and 180 seconds in the AM and PM peak hours, respectively, for all three Alternatives to facilitate a consistent comparison. **Table 6.1** shows the delay and Level of Service (LOS) results comparison based on the Synchro results. The Synchro output results can be found in **Attachment D**.

**Table 6.1. SR 64/Lena Road Design Year (2045) LOS and Delay Comparison**

## 8.0 SR 64/Lena Road Proposed Northbound Approach Geometry

Overall, the dual-left Alternative has the lowest intersection delay and the queue storage accommodates the expected queues sufficiently, with three turn bays expected to spill back minimally. Note that the turn bays accommodate the expected vehicle queues when deceleration lengths are not considered. The timing may be further optimized by taking green time away from the eastbound and westbound approaches and fine-tuning in the field when the signal is in place. This Alternative is also conducive to safe and efficient pedestrian crossing phases.

## 9.0 Design Year (2045) Build Alternative Operational Analysis

The intersection analyses were conducted using Synchro, version 11.1.2.9. The dual-left northbound approach Alternative for the SR 64/Lena Road intersection is shown in the results tables below, as it is the proposed geometry. A PHF of 0.95 was used in the future year analyses rather than the existing PHFs. Truck percentages for each movement from the turning movement counts were maintained in the design year (2045) analysis. **Table 9.1** shows delay and LOS results based on the Synchro results. The Synchro output results can be found in **Attachment E**.

**Table 9.1. Design Year (2045) LOS and Delay**

## 11.0 Summary and Conclusions

The results of the traffic operational analysis indicate that the Lena Road/Landfill Road intersection is expected to operate at LOS A through the design year (2045) in both peak hours under the proposed Build Alternative. The queuing analysis shows that this intersection design is expected to have sufficient storage space to accommodate the projected traffic demand.

Three northbound approach configurations were analyzed at the SR 64/Lena Road intersection and it is expected that the geometry that includes 2 left-turn lanes, 1 through lane, and 1 right-turn lane will perform most efficiently in terms of accommodating the project traffic demand. The results of the traffic operational analysis indicate that the SR 64/Lena Road intersection is expected to operate at LOS E through the design year (2045) in both peak hours under the proposed Build Alternative. The timing may be further optimized by taking green time away from the eastbound and westbound approaches and fine-tuning in the field when the signal is in place.

The queue storage space accommodates the expected queues sufficiently at the SR 64/Lena Road intersection, with three turn bays expected to spill back minimally. Note that all turn bays accommodate the expected vehicle queues when deceleration lengths are not considered. The SR 64/Lena Road intersection northbound dual left-turn bays should be extended back towards the Lena Road/Brower Drive-Musgrave Ranch Road intersection, which is being proposed as a roundabout, to maximize storage space.

Lena Road Corridor Study Traffic Analysis Memorandum Determined Growth Rates

## Determined Growth Rates

The Lena Road corridor connection between south of 44th Avenue East to north of Landfill Road does not currently exist. The historical traffic growth rates were based on Station 08-51 along Lena Road, north of the project limits.

Growth rates for existing and no build scenarios were not applicable as the segment doesn't currently exist.

A Build growth rate of 3.04% was used to forecast the Design Year (2045) traffic volumes for the Build 2-lane roadway connection scenario, based on the 10-year historical traffic trend growth rate from station 08-51.

**Table A** shows the growth rate comparison and the proposed growth rates for the Lena Road corridor.

Table A | Determined Growth Rate

Source	Calculated Growth Rate
Historical Traffic (5 Years) - Manatee County Station 08-51	3.85%
Historical Traffic (10 Years) - Manatee County Station 08-51	3.04%
BEBR - Low	0.51%
BEBR - Medium	1.46%
BEBR - High	2.56%
D1RPMv2.0 - No Build	N/A
D1RPMv2.0 - Build	N/A
D1RPMv2.0 - Project Area SE Data	3.10%
Proposed Growth Rate	Existing N/A No Build N/A Build 3.04%

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:WBT and 6:EBT, Start of Green

Natural Cycle: 170

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.19

Intersection Signal Delay: 71.6

Intersection LOS: E

Intersection Capacity Utilization 106.2%

ICU Level of Service G

Analysis Period (min) 15

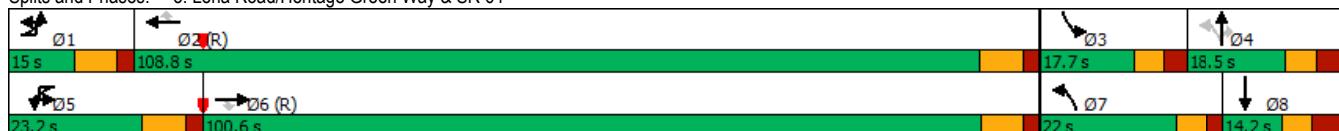

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 80

Actuated Cycle Length: 47.9

Natural Cycle: 65

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.37

Intersection Signal Delay: 7.9

Intersection LOS: A

Intersection Capacity Utilization 39.3%

ICU Level of Service A

Analysis Period (min) 15

90th %ile Actuated Cycle: 55.8

70th %ile Actuated Cycle: 50.4

50th %ile Actuated Cycle: 49.1

30th %ile Actuated Cycle: 48.3

10th %ile Actuated Cycle: 36

Splits and Phases: 4: Lena Rd & Powell Johnson Rd/Landfill Rd

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:WBT and 6:EBT, Start of Green

Natural Cycle: 180

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.09

Intersection Signal Delay: 63.1

Intersection LOS: E

Intersection Capacity Utilization 100.6%

ICU Level of Service G

Analysis Period (min) 15

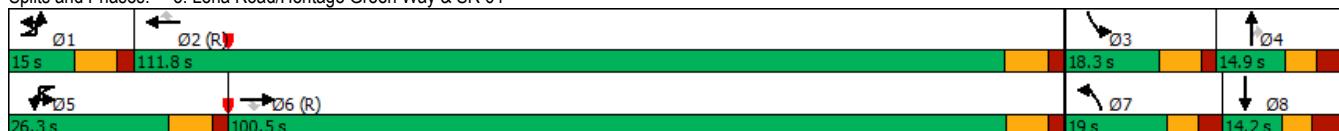

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 5: Lena Road/Heritage Green Way & SR 64

## Lanes, Volumes, Timings

4: Lena Rd &amp; Powell Johnson Rd/Landfill Rd

Intersection Summary

Area Type: Other

Cycle Length: 180

Actuated Cycle Length: 180

Offset: 0 (0%), Referenced to phase 2:WBT and 6:EBT, Start of Green

Natural Cycle: 170

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.15

Intersection Signal Delay: 74.0

Intersection LOS: E

Intersection Capacity Utilization 110.8%

ICU Level of Service H

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 5: Lena Road/Heritage Green Way & SR 64
